

Your Hamiltonian

Any callable $H(l)$ returning a Hermitian matrix, of any size, or a constant one.

hamiltonians, matter, earth, solarmodels

The worked scenarios and the profiles they run through: PREM, the Sun, NSI, LIV, sterile.

oscprob

56 named wrappers
→ four scenario functions
→ seven engines, tried in order;
the last is `osc_prob`'s ladder

magnus

The expansion to ten terms, the quadrature, the slab composition. No physics in it.

Magnus patches

avgprob, adiabatic

The routes that walk no slabs: the phase average, and transport along the eigenbasis.

expmkernels

Compiled kernels: agree to round-off, $\approx 7\times$ faster at three flavors.
