

How *Magvs* answers a call: the six engines, in dispatch order

Each declines what it cannot serve and falls through to the next

Closed-form average ►

Averaged P asked for,
 $\mathbb{H}$ independent of l

Adiabatic + Magnus ►

Smooth profile, no declared
breakpoints — and it certifies

Interaction picture ►

Tagged exponential profile,
exactly two flavors

Vacuum phase removed analytically, then one Magnus pass

Energy-batched scan ►

$E_1 \dots E_n$

Many energies sharing
one baseline

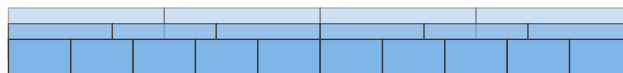

Cumulative scan ►

A baseline scan
at one energy

$P(L_1), P(L_2), \dots$

General Magnus ladder ►

↓
Refine

Otherwise; never skipped
